

Panel Scan Traceability System

Don't settle for anything less than the best traceability solution for your PCB manufacturing process.

The ultimate traceability solution for capturing barcode data from multi-array PCBs on your conveyor line. With this integrated system, you can easily track and trace your PCBs through every step of the manufacturing process, ensuring the highest level of quality control and efficiency.

Applications

- Contract Manufacturers
- Automatic Electronics
- Medical Electronics
- Military Electronics
- Large Format PCB Assemblers
- Machine Builders
- MES Providers
- Material Handling

1 Efficiency
High-speed scanning capability with up to 100,000 lines per second. Continuous scanning mode for seamless image capture

2 Traceability
The system captures barcode data from each PCB and stores it in a centralized database. Digital records of each image for easy tracking and analysis. Easily access real-time tracking and reporting data.

3 High Quality Image
High resolution imaging up to 4k with up to 3,840 pixels per line. Advanced digital image processing technology for accurate and reliable results

4 AI Inspection
Built-in artificial intelligence (AI) algorithms for automatic defect detection and classification. Customizable inspection parameters to meet specific production line requirements

User-friendly interface
